Asset Management

Asset Management is the process of in determining the operational performance and profitability of industries that operate assets as part of their core business. Managing primarily physical assets plays a key role in the selection, maintenance, inspection and renewal of assets. The Software have been emerging effectively and steadily in recent years, and today the science of asset management is accessible to any organization willing to undertake fundamental change in the way they manage production assets.

Asset Management will help you with Multiple salary structure management, to control high attrition rate, high statutory compliance, different salary calculation methods, consolidation of reports(Employee grade wise, department wise, structure wise, company wise, etc.) becomes a very tedious job, complete end-to-end employee accounting is required which is not possible with a manual process where in the employee size is more.

The Results and Rewards can be astounding!

In most manufacturing or distribution operations, maintenance department costs are 3 to 20 percent of operating costs. Asset Management is the art of making the right decisions and optimizing these processes. Those assets can take the form of buildings, machinery, computers and other electronic equipment, office furnishings, even assets you build. A common objective is to minimize the whole life cost of assets but there may be other critical factors such as risk or business continuity to be considered objectively in this decision making.

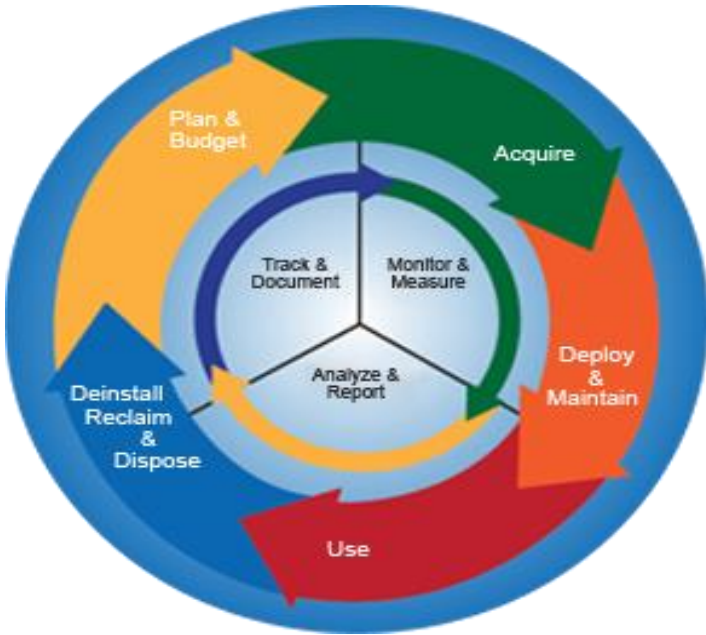

Asset Management
