Time Attendance

Managing your workforce in an efficient, fast and smart way can significantly improve your business in terms of profit and productivity. Major Capabilities of Time and Attendance System include Attendance management, Time Management and leave management. Organizations cannot afford to require manual process between time reported and compensation. Rather, employee requests for leave or vacation time must be handled through accordance with policies of eligibility.

With Automated time tracking systems in Time attendance software ensures elimination of human errors while recording employee work hours. Case studies have shown that time and attendance software operates with more than 99 % accuracy as compared to traditional paper time sheets and manual time tracking.

The introduction of employee time clocks in the business environment ensures an increase in efficiency and organizational productivity. Decreased time theft means that businesses not only save in terms of employee wages but also in terms of productivity. Larger businesses are able to eliminate multilayer supervision and employee management that contributes to the business revenues.

Organizations are able to reduce labor costs considerably with the introduction of time attendance software into the workplace. There is lesser need for employee supervision for time and attendance recording as well as on the job. Business owners are also able to add value to their businesses with employee work hour data as the software is not only accurate, but it takes mere minutes to correlate and process the recorded data.
