Vehicle Management

The automobile is a truly amazing machine. It is expected to function under a wide range of weather conditions and other adverse conditions, yet it often is subjected to careless hard driving and indifferent maintenance. Recommended service intervals are often ignored by the car owners. A periodic maintenance program such as the one in this book can keep the car owner more aware of the condition of his or her car and will save money in three important areas - fuel economy, emissions and performance.

Tracking your vehicles will help you to reduce fuel costs and overtime claims, as well as increase productivity and the efficiency of your workforce. Knowing where your fleet is 24 hours a day, 365 days a year will give you more control and drive efficiencies. All it takes is access to the internet and our Vehicle Monitoring Software that can help you to reduce costs and improve productivity. The latest satellite technology allows information about your fleet to be viewed in real time on your web-enabled computer.

Vehicle monitoring system are widely used worldwide. Components come in various shapes and forms but most utilize GPS technology and GSM services. While most will offer real-time tracking, others record real time data and store it to be read, similar to data loggers. This type of systems track and record and allow reports after certain points have been solved.

Vehicle Management

Other scenarios in which this Vehicle Monitoring can benefit

- ✓ Stolen vehicle recovery: Both consumer and commercial vehicles can be outfitted with RF or GPS units to allow police to do tracking and recovery.
- ✓ Fleet management: When managing a fleet of vehicles, knowing the real-time location of all drivers allows management to meet customer needs more efficiently.
- ✓ Asset tracking: Companies needing to track valuable assets for insurance or other monitoring purposes can now plot the real-time asset location on a map and closely monitor movement and operating status.
- ✓ Fuel Monitoring: This is another important usage of vehicle tracking to monitor the fuel through tracking device.
- ✓ Distance Calculation: This is an important usage of vehicle tracking to calculate the distance travel by the fleet.
